

## Operation Guide for Hobart Propane Convection Oven HGC5

Following these simple instructions will ensure the successful operation of your rental appliance.

- A) Power switch
- B) Thermostat
- C) Cook timer
- D) Fan speed switch

### Operation of Oven

- 1) Ensure that power switch (A) is in the OFF (middle) position.
- 2) Connect gas regulator to propane canister and open canister valve.
- 3) Plug unit into wall receptacle.
- 4) Set power switch (A) to the on (up) position.

- 5) Adjust thermostat (B) and fan speed switch (D) as needed. Heat light will go out when oven is ready.
- 6) Oven doors **MUST** be closed for the oven to operate.
- 7) When done cooking, power switch (A) can be moved to the Cool Down (down) position to operate fan with doors open.
